✍ Draft Whitepaper (English)

Multi (MLT)

Blockchain: Binance Smart Chain (BEP-20)

Smart Contract: 0x903404e6B32D1376CE0BfA62681799c92737b8A8

Abstract

Multi (MLT) is a decentralized meme-powered cryptocurrency built on the Binance Smart Chain (BSC). Designed with a strong community-first approach, MLT combines the entertainment value of meme coins with a deflationary tokenomics model, long-term liquidity lock, and transparent governance. With its focus on fairness, security, and scalability, Multi aims to create a lasting ecosystem that rewards holders and fosters viral community growth.

Introduction

The meme coin space has shown the power of communities in driving adoption and market growth. However, many meme coins lack transparency, real allocation, or long-term vision. Multi (MLT) solves this by implementing a strong allocation system, long-term token locks for founders and developers, and a deflationary supply through burns.

Mission

Our mission is to create a community-first meme coin with fairness, transparency, and trust. By locking founder and team allocations and focusing on liquidity, we ensure a secure foundation for long-term growth.

Meme coins have rapidly evolved from being internet jokes into multi-billion-dollar assets. However, many meme coins lack transparency, long-term sustainability, or clear roadmaps.

Multi (MLT)

addresses these issues by:

- Ensuring **50% supply burn at launch**, making MLT a scarce and deflationary token.
- Locking **founder and dev team tokens** for long-term security.
- Allocating a fair distribution for giveaway, liquidity, and giveaways.
- Building a **community-driven ecosystem** where every holder plays a role.

Vision

To become a globally recognized meme token that combines humor, community spirit, and long-term growth through innovation, transparency, and viral adoption.

Why Binance Smart Chain?

BSC offers:

- 0 transaction fees.
- Fast block times.
- Massive community and liquidity.
- Compatibility with major DEXs like PancakeSwap.

This makes it the ideal foundation for MLT.

Token Utility

Multi is not just another meme token. It brings:

- **Deflationary Model** – with a 50% burn and future burns.
- **Liquidity Stability** – 50% liquidity allocation ensures smooth trading.
- **Giveaways & Airdrops** – 10% allocation for rewards and marketing.
- **Community Governance** – token holders will influence future decisions.
- **Future Use-Cases** – NFTs, staking pools, and potential gaming integrations.

Tokenomics

- **Total Supply:** 1,000,000,000,000 (1 Trillion) MLT
- **Initial Burn:** 50% (500 Billion MLT permanently removed)
- **Remaining Allocation (500 Billion):**
    - 10% Founder (locked long-term)
    - 10% Developer Team (locked long-term)
    - 10% Future burns & giveaways
    - 20% Giveaway
    - 50% Liquidity Pool

Deflationary Mechanism

Multi integrates a long-term burn mechanism. With 50% supply burned at launch and an additional allocation for future burns, MLT ensures scarcity and value appreciation over time.

Liquidity

50% of the remaining supply is allocated to liquidity pools, ensuring stability, tradability, and long-term trust in the ecosystem.

Roadmap

Phase 1: Launch

- Token creation & contract deployment
- 50% burn
- Website & whitepaper release
- Giveawaylaunch

Phase 2: Growth

- PancakeSwap listing
- CoinMarketCap & CoinGecko listing
- Meme marketing campaigns
- Community giveaways

Phase 3: Expansion

- Centralized Exchange listings
- NFT collection launch
- Strategic partnerships
- 50k+ holders target

Phase 4: Ecosystem

- DAO-style governance
- Staking & yield features
- Multi-token ecosystem expansion

Community & Governance

Multi (MLT) is a community-first token. Early supporters can join the whitelist for Giveawayallocations. Giveaways and burns will be conducted to reward loyal holders and build long-term trust.

Multi will be driven by its community. Token holders will have voting power on:

- Burn schedules
- Giveaway campaigns
- Marketing decisions
- Ecosystem expansion

Security & Transparency

- Founder and Developer tokens are **locked long-term** to ensure no rug-pull.
- Smart contract deployed on Binance Smart Chain:
  0x903404e6B32D1376CE0BfA62681799c92737b8A8
- **Liquidity locked** for long-term trust.
- **Founder & dev team tokens locked** to avoid rug-pulls.
- Contract verified on BscScan.
- Third-party audits planned post-launch.

Marketing Strategy

- Viral meme campaigns on Twitter, Telegram, TikTok.
- Influencer partnerships.
- Regular community contests.
- Meme challenges to spread brand visibility.

Listing Strategy

- PancakeSwap launch (DEX).
- CoinMarketCap & CoinGecko listing applications.
- Targeting mid-tier CEX listings in expansion phase.

Future Ecosystem

The long-term goal is to expand Multi into:

- **NFT Marketplace** powered by MLT.
- **Play-to-Earn mini games** using MLT.
- **Staking & farming pools** to reward loyal holders.

Team

The Multi team values privacy but commits to transparency in actions. Roles include:

- **Founder:** Strategy & Vision
- **Developers:** Smart contract & ecosystem
- **Marketing Lead:** Social campaigns & partnerships
- **Community Managers:** Telegram, Discord, Twitter engagement
